

Bock Compressors for Mobile Applications

Vehicle compressors for bus-, railway air-conditioning and transport refrigeration

In touch with our customers

GEA Refrigeration Technologies: Your partner for low temperatures

GEA Refrigeration Technologies, part of the internationally active GEA Group, is a synonym for industrial refrigeration technology. Since the end of the 19th century, it has been our business to cool processes and products, and to control the temperature of goods in transport.

You will find our solutions in the food and beverage sector; in the petrochemical, chemical, and pharmaceutical industries; on fishing ships; in natural gas liquefaction; in infrastructure facilities; and in ice factories. We are also at the top with know-how when it comes to refrigeration at leisure facilities. After all, we have been excited about refrigeration for decades now. As a result, our staff enthusiastically goes about its development and production projects – to include preventive and remedial maintenance of your refrigeration systems.

This enthusiasm is highly apparent in the daily work of all companies in our Segment. Whether it's complete systems or individual valves: we have the experience in every section of our company to optimally design, manufacture, and install refrigeration systems. And to take full advantage of this experience, we not only carry out development in our own company: we also manufacture, assemble, and test the core components. A chain is, after all, only as strong as its weakest link: and this also applies equally well to refrigeration technology, cooling processes, and cooling chains.

This makes it all the more important that you have a partner – in GEA Refrigeration Technologies – that has learned to master refrigeration from A to Z. And all of this since 1896, when Willem Grasso founded his refrigeration division. From this history of GEA Refrigeration Technologies, you will profit in the form of technical expertise and top sector know-how.

But we all live in the present and think about the future. We ponder a future in which more and more processes need energy around the world, and fewer natural resources are available. As a result, we have taken it as our goal to create solutions that are not only long-life and cost-effective, but also energy-saving and environment-protecting. We feel obligated to sustainability in many respects. Our objective is to produce longlife and material-saving products over the long run – as well as products that use environmentally benign refrigerants. And we aim to produce efficiently. But our responsibility does not end at the factory gate. As a result, we take great pains to ensure that our systems are energy-efficient and that they protect the climate. With GEA Refrigeration Technologies, you can also count on optimal economy: saving energy indeed means reducing money spent for energy. At the same time, you protect the environment. Thanks to our refrigeration technology, your processes will run more economically and more ecologically. To maintain our standard of living and to assure quality of life for future generations as well. Our claim of combining economy with saving natural resources is reflected in all components of our company, such as the following: compressors, chillers, heat pumps, ice machines, fittings and valves, control systems, and many, many more. You can find proof of the above throughout the world. Our international corporate network – and above all our reference projects – are spread all over the globe.

GEA Bock - More than a compressor

Over 80 years ago, when the refrigeration and air-conditioning industry was still in its infancy, our company's founder, Wilhelm Bock, had a vision: He wanted to build first-class and reliable refrigeration machines. In the following decades Bock developed into one of the world's leading manufacturers of refrigeration and air-conditioning compressors.

As part of the GEA Group AG, GEA Bock offers the right compressor for refrigeration and air conditioning in all commercial, industrial, rail, bus and transport sectors.

Besides the vehicle compressors of the FK-series for classical Diesel engines, new technologies have moved into GEA Bock's focus. For example special compressors for the use in hybrid systems.

These electric powered, semi-hermetic compressors offer numerous advantages for mobile applications. The aluminum version is for example about 40 % lighter than comparable standard compressors and contributes to the innovative lightweight construction of vehicles.

Based on the current semi-hermetic program there is now a compressor series available for the use with the refrigerant R407C with expanded fields of application.

No matter what your application is – GEA Bock offers you the ideal compressor for your individual demand.

Be inspired. By our new products, our established product series and the entire passion that goes into each of our products.

Semi-hermetic compressors HG (HA)

The GEA Bock HG (Hermetic Gas-cooled) range of semi-hermetic compressors offers traditional suction gas-cooled compressor state of the art technology. These compressors of the highest quality standard excel in their running comfort, easy maintenance, efficiency and reliability. Suitable as standard for conventional or chlorine-free HFC refrigerants.

The HA (Hermetic Air-cooled) range, specially engineered by GEA Bock, is available for deep-freezing applications, in particular for use with the refrigerants R22 and R404A.

- Single-stage
- CO₂ compressors subcritical
- CO₂ compressors transcritical
- R134a compressors
- R407C compressor
- ATEX compressors
- HC compressors
- Aluminium compressors
- 2-pole compressors
- Two-stage compressors
- Duplex compressors
- Compressor units with receiver
- Condenser units air-cooled

Vehicle compressors FK

GEA Bock vehicle compressors of the FK range are the result of many years of experience in the domain of mobile cooling systems.

The unsurpassed light, compact, robust design and wide r.p.m. range are only some of the outstanding features of this unique product range of two, four and six cylinder compressors.

A wide variety of designs can be tailored to suit individual requirements.

The so-called K version is a special innovation with a unique valve plate system for maximum requirements in bus and coach air-conditioning systems.

- Compressors for bus and train air-conditioning
- Compressors for transport refrigeration and other applications

Open type compressors F

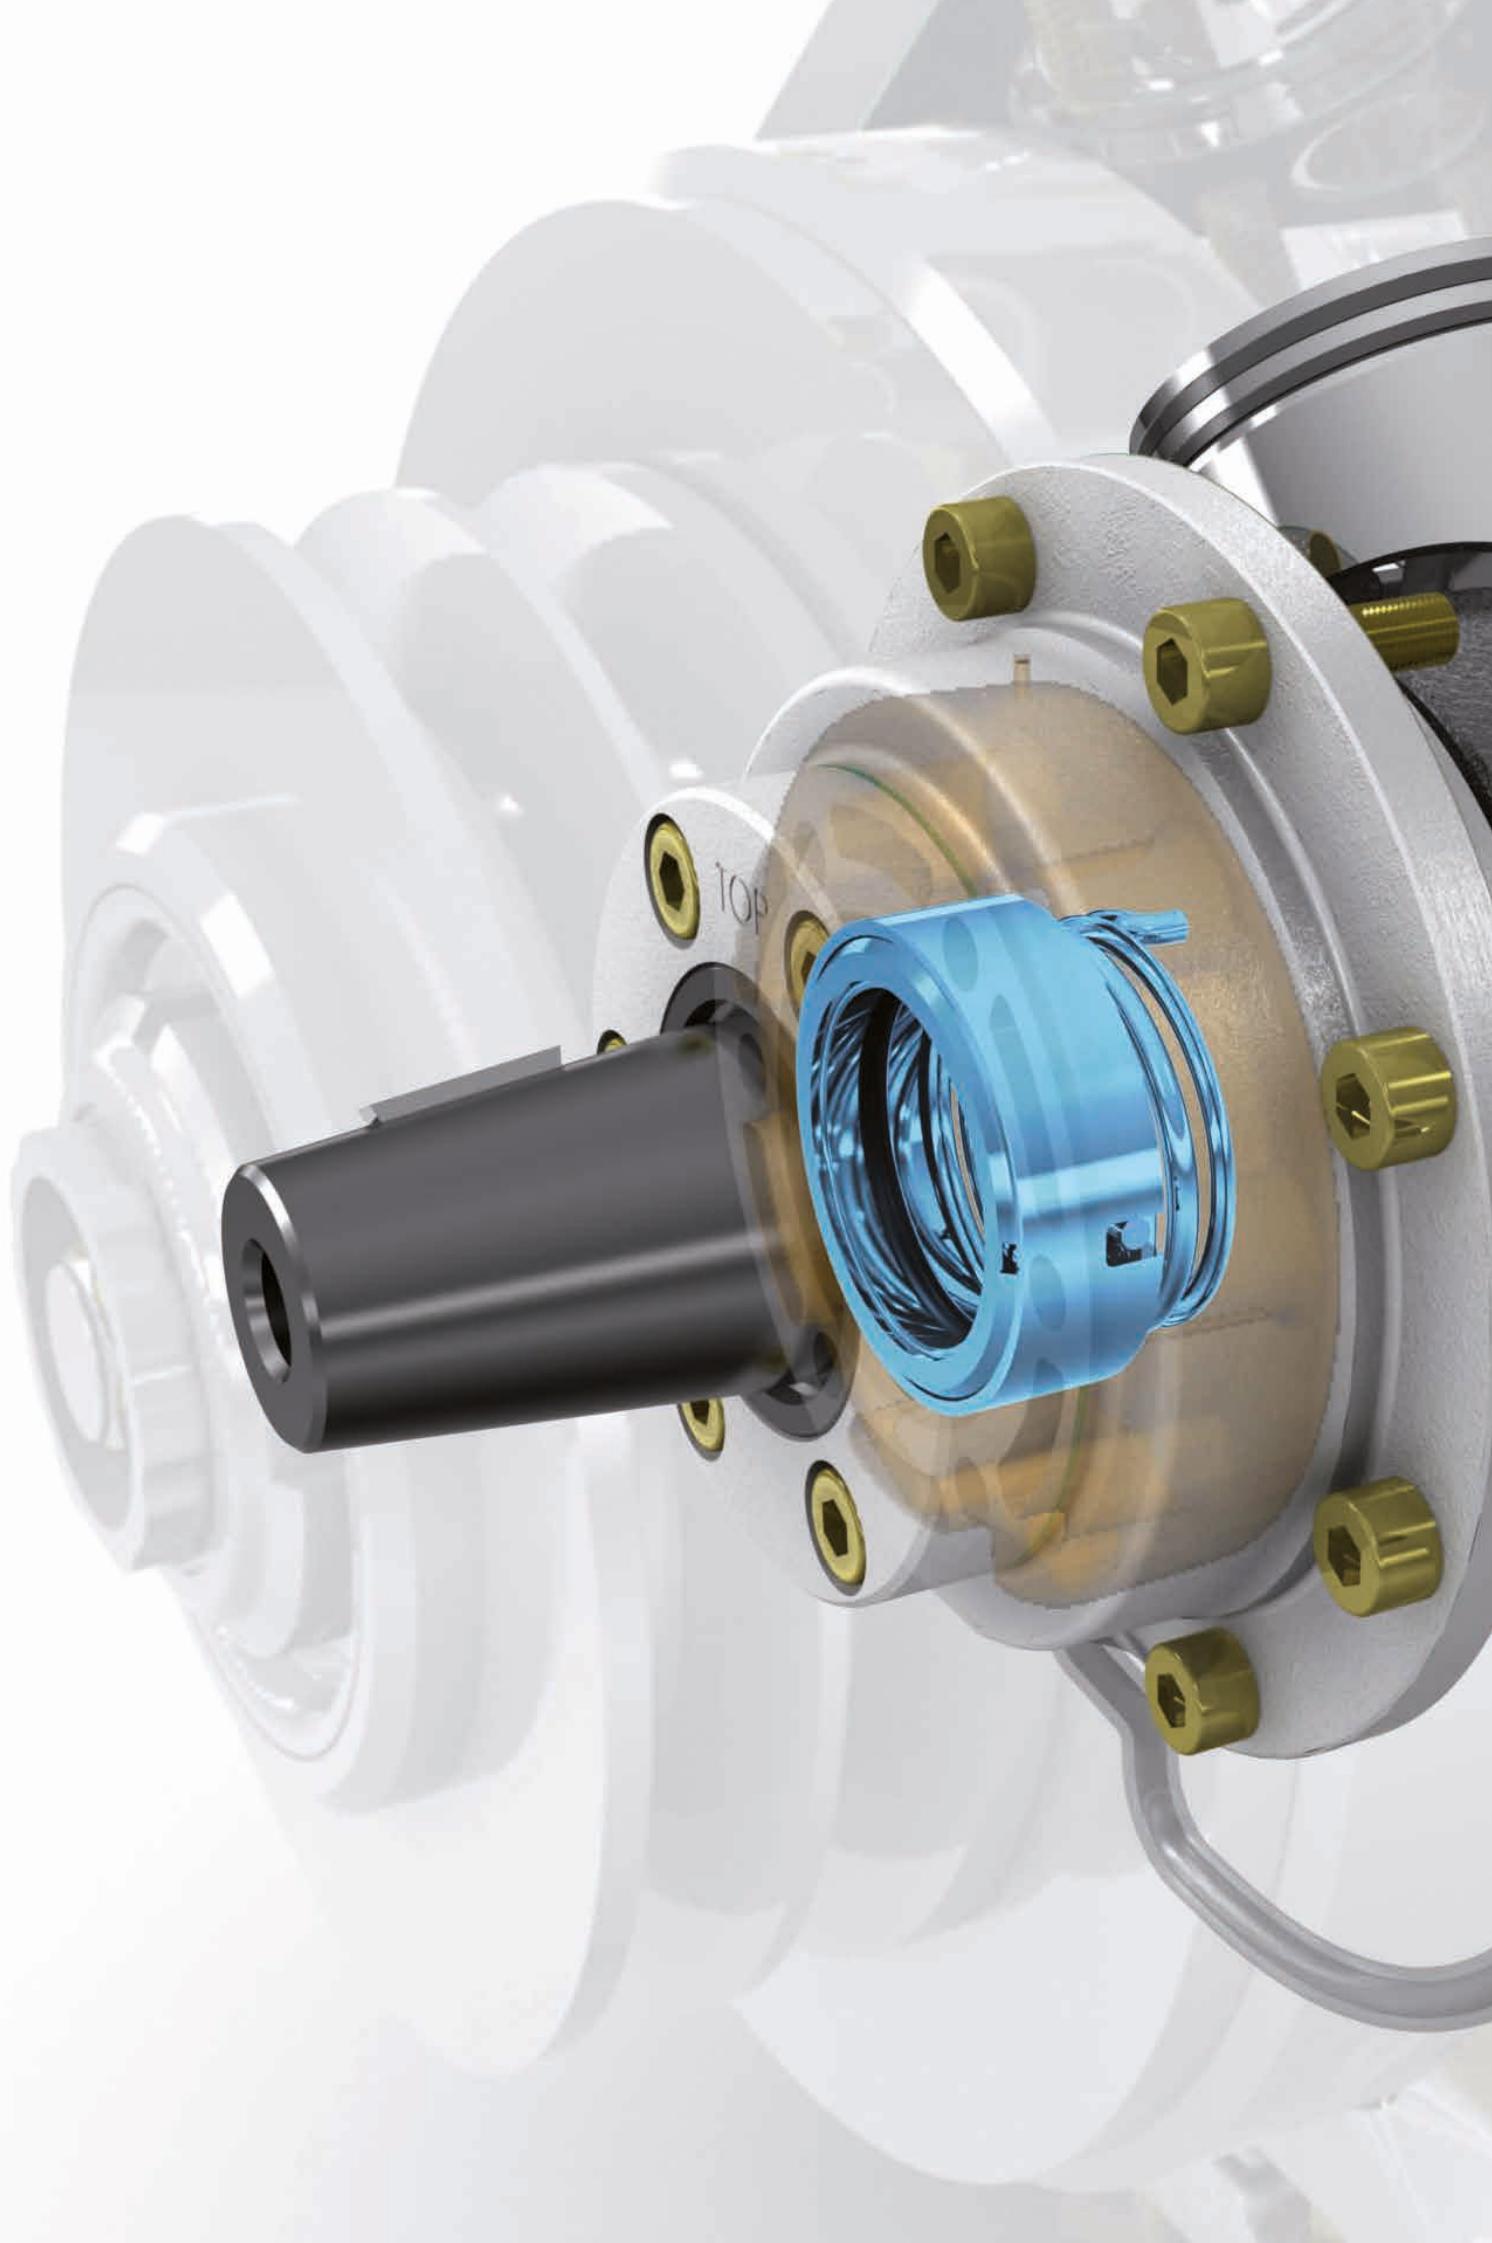

The F model series provides modern open type compressors for separate drive systems (using V belts or direct couplings). The power transmission occurs via an elastic flexible shaft coupling.

Virtually all drive capacity requirements can be met.

Very compact compressor design, robust and easy to handle. Oil pump lubrication as standard.

- F compressors
- F NH₃ compressors
- Compressor units for direct drive
- NH₃ compressor units for direct drive

The difference is in the detail -

Vehicle compressors

Special features

8

Open type 2-, 4- and 6-cylinder compressors in full-aluminium lightweight construction

Whether in bus- or railway air-conditioning, transport refrigeration or other applications of mobile cooling - Bock FK compressors are specialists around the world.

- Unsurpassed light and compact design
- Highly robust design
- Wide speed range
- Efficient operating performance
- Universal application

Three design variations are available for different areas of application:

- For air-conditioning - the K Design
- For air-conditioning or normal cooling - the N Design
- For deep freezing - the TK Design

The differences are mostly associated with the valve plate version which is adapted to each application range where operational safety and efficiency are concerned.

Additionally we have different solutions for the flexible adaptation of the compressors to your individual requirements.

Talk to us. Our competent team will be pleased to advise you.

Low-wearing long-lived mechanism

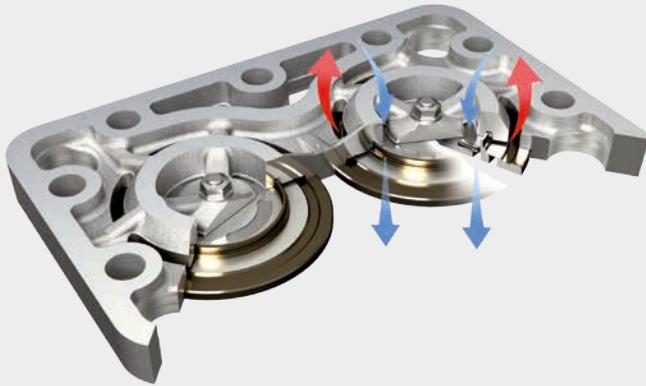

- Solid construction and design
- Classic crankshaft construction with hardened surface
- Double-sided roller bearing mounting design for maximum radial forces
- Aluminium pistons with two-ring assembly
- Aluminium connection rod in divided, screwed design
- Quiet with low vibrations
- Four cylinder construction from 385 cm³
- Six cylinder already from 662 cm³
- Minimum oscillating mass, connecting rods and pistons made out of aluminium
- Dynamic mass balance of the whole drive-mechanism
- High volume pressure area to dampen pulsations

Reliable and safe oil supply

- Self-contained lubrication through an internal rotor pump high performance, independent of rotating direction, compact
- Oil overpressure valve to regulate the oil pressure
- High volume oil sump
- Two sight glasses for checking the oil level (FK40/50), (FK30 one sight glass)

The K Design

- A special GEA Bock innovation. The unique valve plate system for highest standards - specially developed for bus air-conditioning systems.
- Service valves made out of high quality, impact resistant spring steel. Extremely robust and reliable, not only at constant variations in speed and in pressure, but also where there are liquids. The base plate of this system is made - of aluminium. The valves are constructed as ring-fin packages and are guided loosely. This means that they are neither exposed to lateral nor torsional powers and thanks to their special construction they cannot fall into the cylinder area or hit the piston head. The no compromise solution for mobile air conditioning.
- Highest safety and efficiency in all areas of application

2

3

4

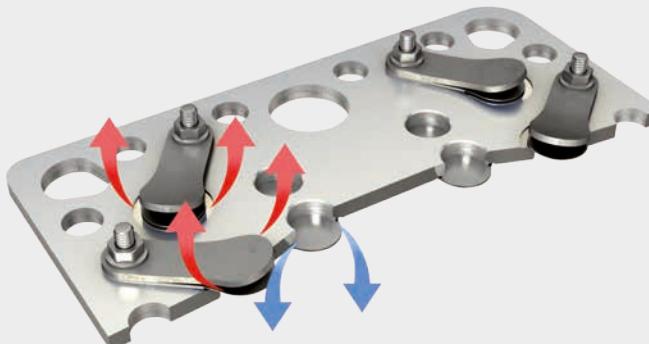

5

6

7

8

The N Design

- The cost-effective alternative to the K Design.
- The universal valve plate system. Suitable for both air-conditioning in buses and for other applications. The base plate is designed in steel. The valve units N and TK design are structured as one-sided fixed tongue fins which makes them form a simple and cost-effective construction. In comparison to the K design, the valves are exposed to lateral and torsional powers, which means that the load carrying ability decreases in particular in air-conditioning where there is fluctuating speed or liquid influence.

The TK Design

- A special variant for deep freezing.
- Built on the N valve plate basic concept with additional measures to optimise the charging efficiency at low evaporation temperatures. The piston heads have suction fin contour grooves, which further reduces the dead space and leads to increased performance in the deep-freeze area.

Integrated oil collection system with a large storage volume

FK30/FK40/FK50:

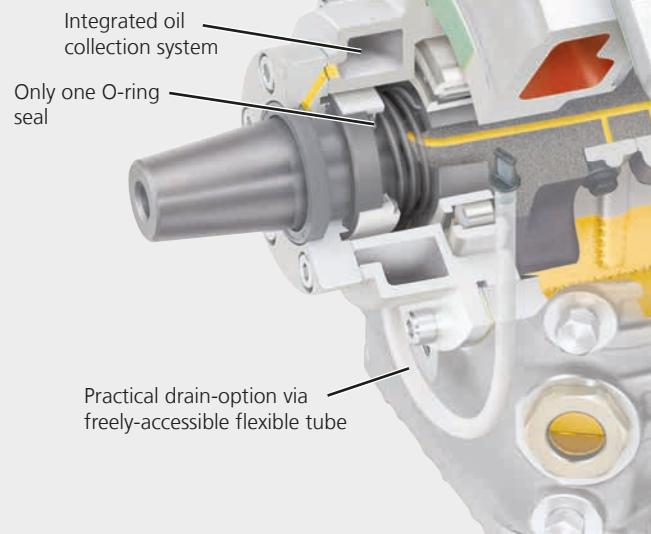

- Practical drain option through a freely accessible flexible tube
- No dismantling of the clutch necessary

Simply constructed shaft seal

- Tried and tested construction for decades
- Only one O-ring seal, counter ring designed as the screw-on cover
- With oil washing for cooling and lubricating the whole unit
- Easy to change the shaft seal for maintenance purposes

Example:

Shaft seal construction FK40

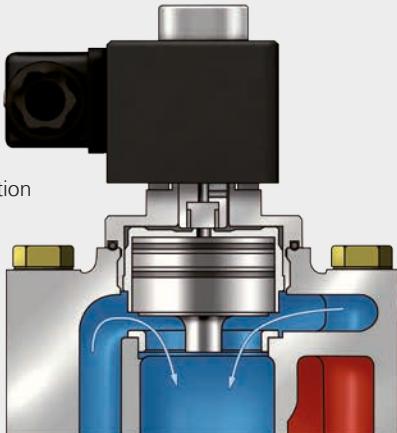

Various drive options

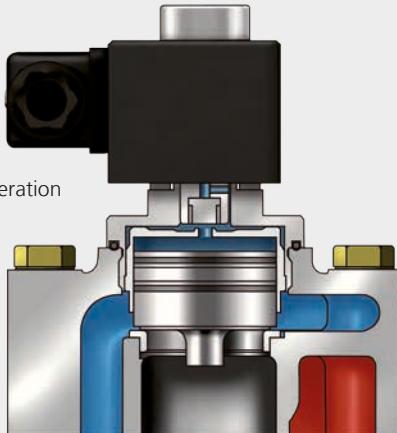

- Conical shaft end for safe force transmission and exact installation of the drive elements
- V-belt drive with electromagnetic clutch or flywheel
- Additional drive types on request

Economic performance regulation (option)

Full load operation

Partial load operation

- Blocking of the intake of a cylinder bank with an electromagnetic pilot valve
- Possible residual capacity:
4-cylinder compressor: 50 % 6-cylinder compressor: 66 % / 33 %

5

6

7

8

Variable connection and fixing options

Special design, example:
Suction shut-off valve mounted on cylinderbank
with intermediate adapter

Special design, example:
Suction shut-off valve mounted between the cylinder covers

- Variable position of the suction shut-off valve (FK30/40/50)
- Rotate options for the suction and discharge shut-off valve
- Fixing options for supplementary attachments

- More variants for fixing the compressor
- Customer-made designs on request

K Design: 500 - 3500 rpm

R134a Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

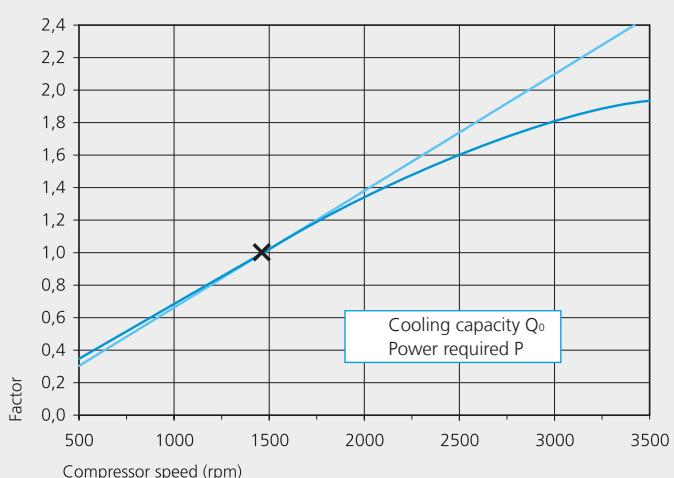

Restrictions to the operating limits may occur when using a capacity regulator.

Performance data

Performance specifications for the R134a are based on 25 °C suction gas temperatures without liquid subcooling (FKX50/830 and FXX50/980 on 20 °C suction gas temperature). Compressor speed 1450 rpm.

The values can be stated to judge the overall performance at other speed with the help of the calculation factors below.

Performance data for other operating points, see GEA Bock software.

R407C Operating limits

FKX20 / FNX30 / FNX40 / FNX50

Max. permissible operating pressure (LP/HP)¹⁾: 19/28 bar

¹⁾ LP = low pressure HP = high pressure

Unlimited application range

Reduced suction gas temperature

t_o Evaporating temperature ($^{\circ}$ C)

t_c Condensing temperature ($^{\circ}$ C)

Δt_{oh} Suction gas superheat (K)

t_{oh} Suction gas temperature ($^{\circ}$ C)

Permissible rotation speed:

N Design: 500 - 2600 rpm

K Design: 500 - 3500 rpm

R407C Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

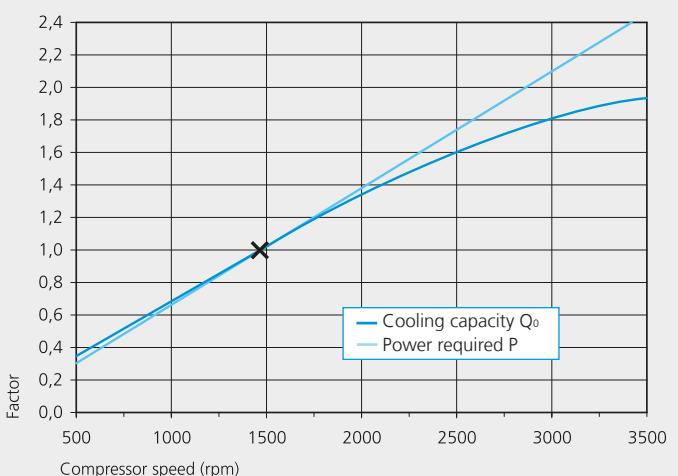

Restrictions to the operating limits may occur when using a capacity regulator.

Performance data

The performance data for R407C are based on 25°C suction gas temperatures without liquid subcooling (FKX50/830 and FNX50/980 on 20 °C suction gas temperature). Compressor speed 1450 rpm.

The values can be stated to judge the overall performance at other speed with the help of the calculation factors below.

Performance data for other operating points, see GEA Bock software.

Vehicle Compressors FK for transport refrigeration

At a glance	32
Operating limits and performance data	33
Technical data	36
Dimensions and connections	37
Scope of supply and accessories	43

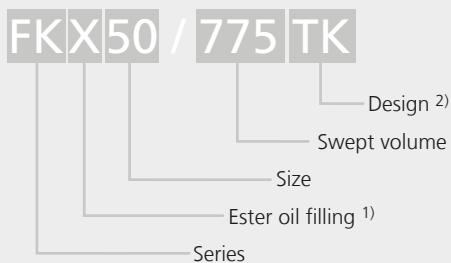

Bock vehicle compressors of the FK series are the result of decades of experience in transport refrigeration.

The unsurpassed light, compact, robust design and wide speed range are only some of the outstanding features of this unique product range of two, four and six cylinder compressors.

A wide variety of designs can be tailored to suit individual requirements.

The TK version, optimized for low evaporation temperatures, is a special variant for deep freezing.

Type key

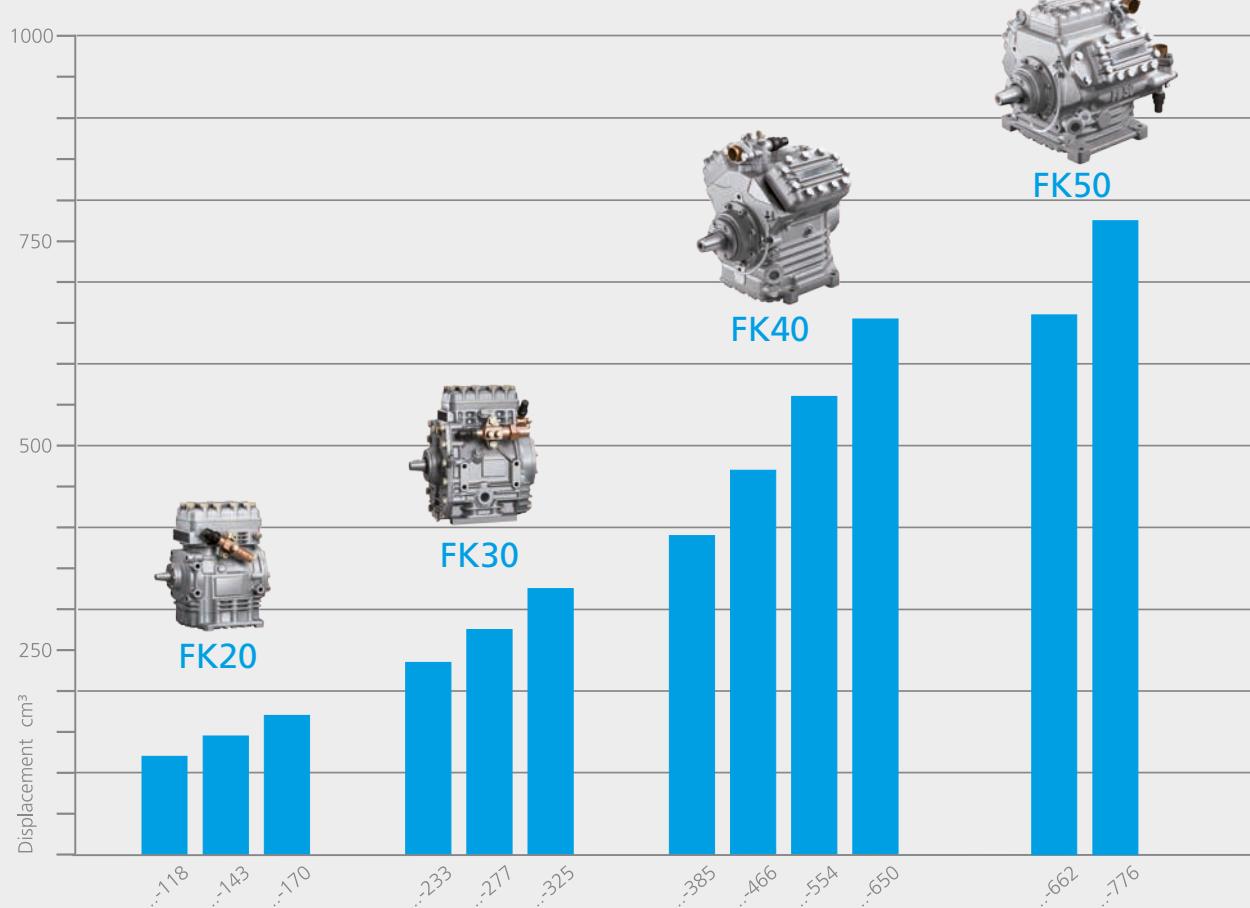

1) X - Ester oil filling (HFC refrigerant, e.g. R404A, R507)

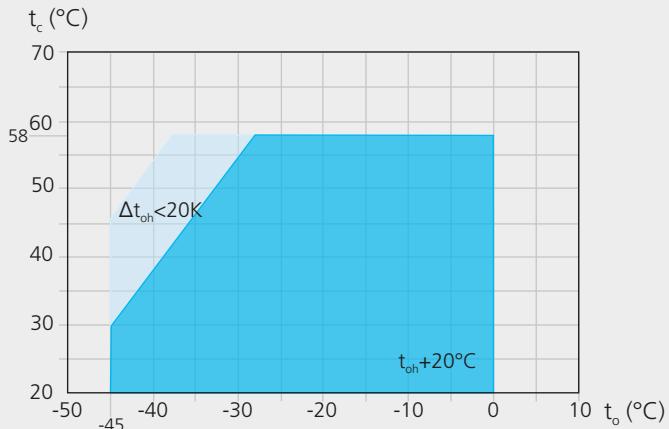

2) TK - specially for deep freezing

The current program

...4 model sizes with 12 capacity stages from 10,3 to 67,6 m³/h (1450 rpm)

R404A/R507 Operating limits

Max. permissible operating pressure (LP/HP)¹⁾: 19/28 bar

¹⁾ LP = low pressure HP = high pressure

FKX20 / FNX30 / FNX40 / FNX50

Unlimited application range

Reduced suction gas temperature

t_o Evaporating temperature (°C)

t_c Condensing temperature (°C)

Δt_{oh} Suction gas superheat (K)

t_{oh} Suction gas temperature (°C)

Permissible rotation speed:

TK Design: 500 - 2600 rpm

R404A/R507 Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

Restrictions to the operating limits may occur when using a capacity regulator.

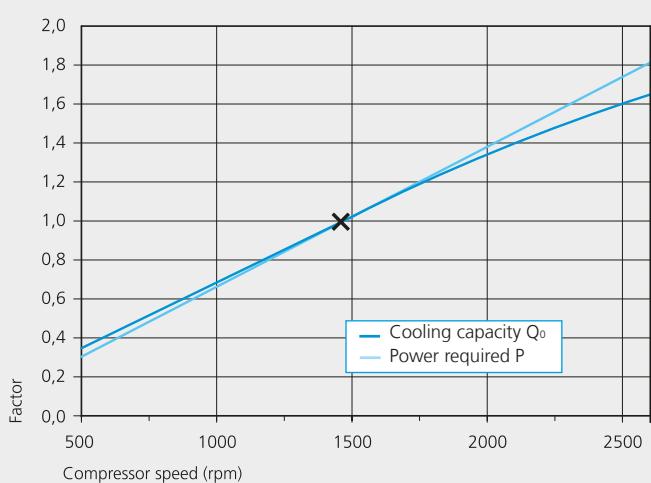

Performance data

The performance data for R404A/R507 are based on 20 °C suction gas temperatures without liquid subcooling.

Compressor speed 1450 rpm.

The values can be stated to judge the overall performance at other speed with the help of the calculation factors below.

Performance data for other operating points, see GEA Bock software.

The difference is in the detail - Characteristics semi-hermetic Bock compressors

Special features	48
MP10 Motor Protection	51
Frequency converter technology	52
ESS Electronic Soft Start	53
e-series	54
Aluminium compressors	55
2-pole compressors	56

Universal

- e.g. R134a, R404A, R507, R407C, R22
- One compressor design for all standard refrigerants.
- For air-conditioning applications, normal refrigeration and deep-freezing
- Maximum allowed operating pressure (HP): 28 bar

High refrigeration capacity combined with minimum power requirement

- Optimized gas flow
- Efficient service valves
- Minimum clearance volume
- Powerful, economic drive motors

Stable valve plate design

- Universally proven valve design with intake and discharge finger reed valves clamped on one side
- Valve made of high quality impact-resistant spring steel

Replaceable motors

The compressors can be repaired in the field as the drive motor can be exchanged. (Not for 2-pole aluminium compressors).

Economic capacity control

- Cylinder cover incorporating a connection for capacity control
- Possible control stages:
 - 4 cylinder: 50 %

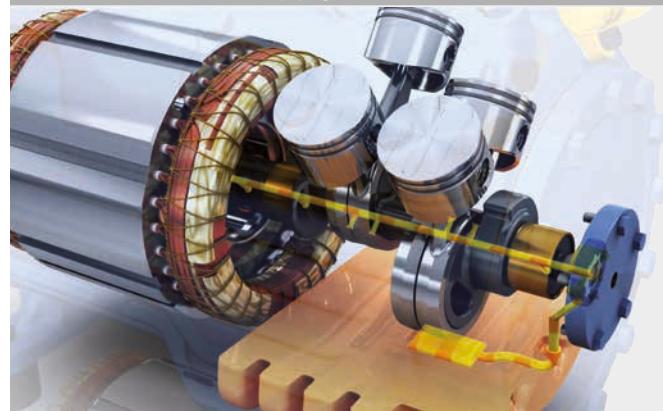

Minimum space requirement

Particularly low installation height and width

Quiet and low vibration

- Generously dimensioned crank mechanism
- Optimized mass balance
- Large volume pressure section for pulsation absorption
- 4 cylinder design from as little as 18,8 m³/h at 50 Hz

Safe, reliable oil supply

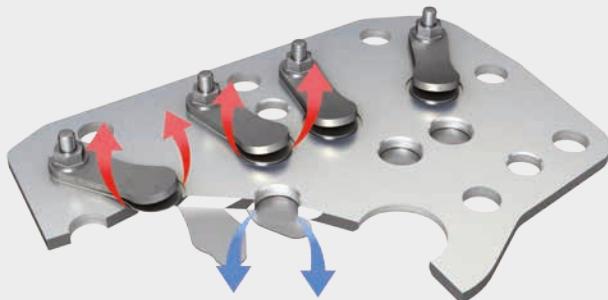

- Forced-feed lubrication independent of direction of rotation
- Large volume oil sump

Wear-resistant durable driving gear

- Solid construction and design
- Low friction sleeve bearings
- Aluminium pistons with two ring assembly

Solid construction and design

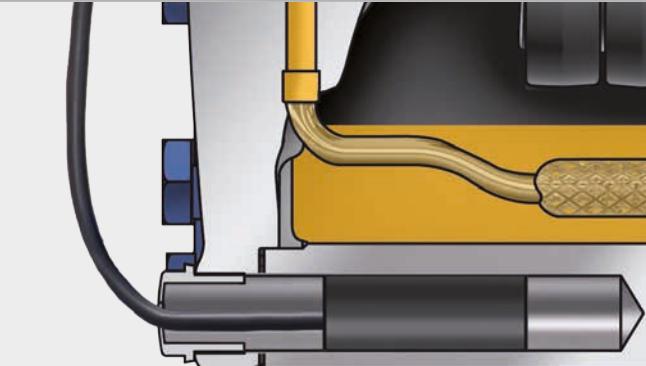

- Valve design, tried and trusted all over the world, with onesided fixed finger reed, suction and pressure side
- Valve made of high quality impact-resistant spring steel

Replaceable motors

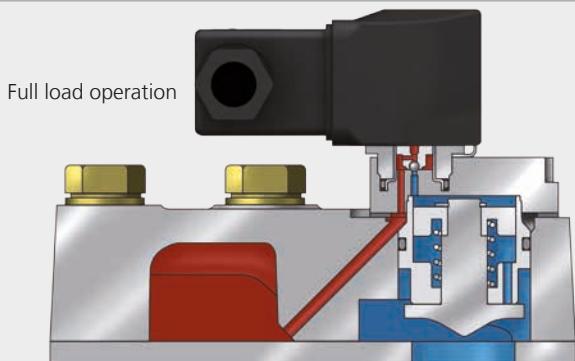

The compressors can be repaired directly on-site, since the motors are replaceable.
Only for grey cast iron housings and 4-pole aluminium compressors!

Variable suction line valve position

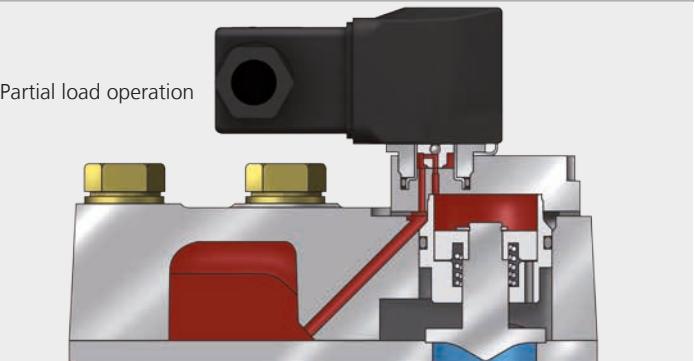

- Shut-off valves rotatable through 90°
- Flexible location for suction line and discharge line connection

Oil sump heater (option)

- Installed in the housing bore
- Replacement without opening the refrigeration circuit

Economic capacity control (option)

Full load operation

Partial load operation

- Locking of suction port of a cylinder bank with an electromagnetic pilot valve
- Possible residual capacity:
4-cylinder compressor: 50 %

Electric switch box

- Robust aluminium construction
- Easy electrical installation due to large internal volume
- Terminal block with cables in glass seal model
- Hinged and removable lifting cover ① with a single quick fastener ②
- Terminal strip for add-on components
- Protection system: IP66

Electric switch box with reduced height (option)

- Terminal box with reduced height (-15 mm)
- Motor protection MP10 as an extra item for control cabinet installation

MP10 Motor Protection

Temperature safety drive for the drive motor

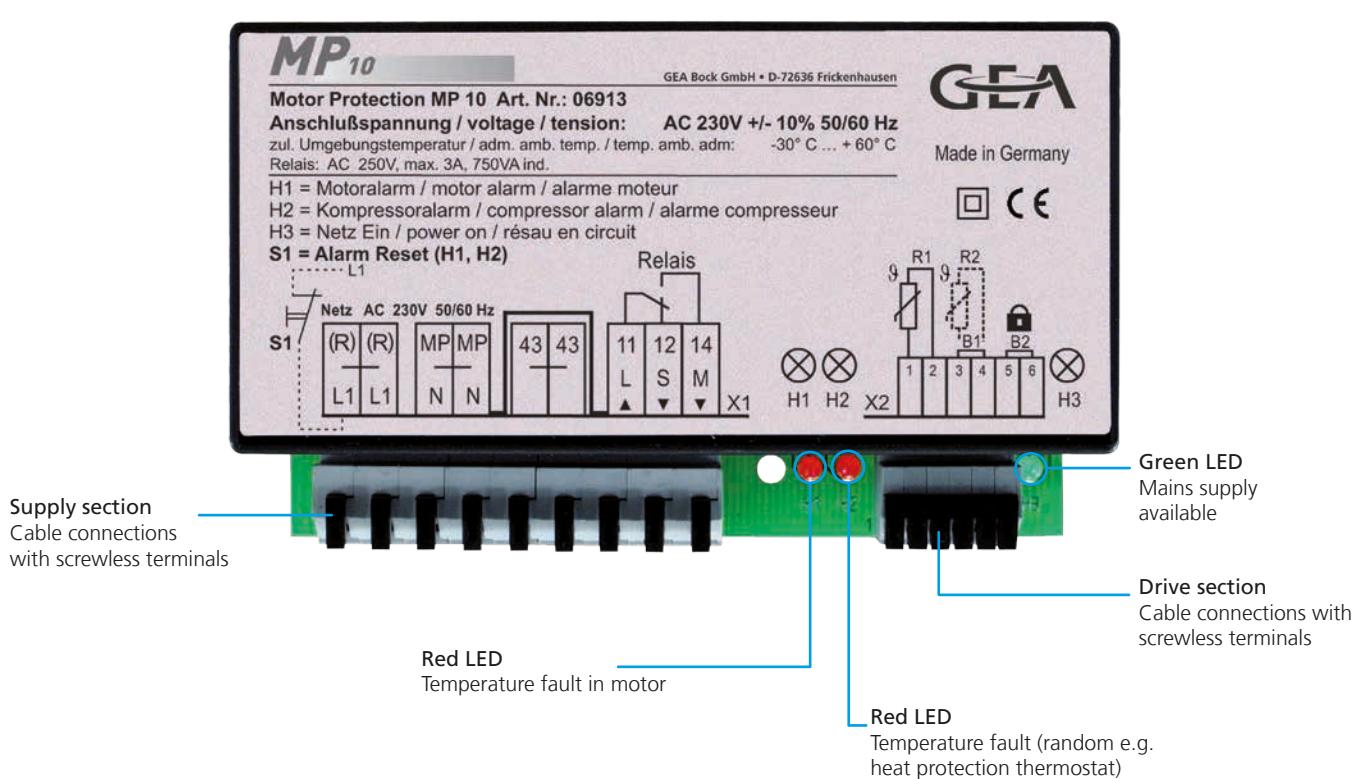

Standard in all compressors

The exceptional feature is that the monitoring function and mains availability are shown by coloured LED's. There are no complicated or time-consuming defect locating processes.

The MP10 also provides the usual functions as standard, e.g. a reconnection preventing device, a reset, free terminals for PTC temperature sensors (e.g. heat protection thermostat) and other useful items.

Technical data

Unit designation	MP10
Connection voltage	AC 230 V - 1 - 50/60 Hz
Relay	AC 250 V, 3 A, 750 VA ind.
Dimensions L/W/H	100 x 60 x 52 mm

Continuously variable speed control using frequency converter technology

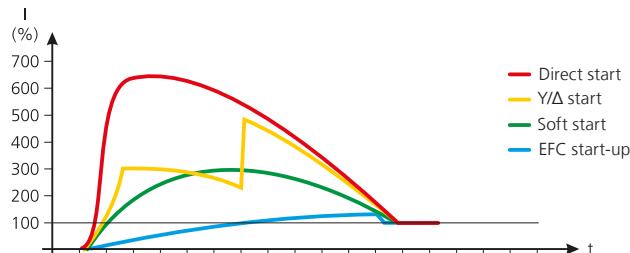

Continuously variable speed control using frequency converter technology is the most efficient means of adapting the capacity of the compressor to current refrigeration plant requirements.

Thanks to the oil pump lubrication all Bock compressors are ideal for speed control, in particular for low frequencies.

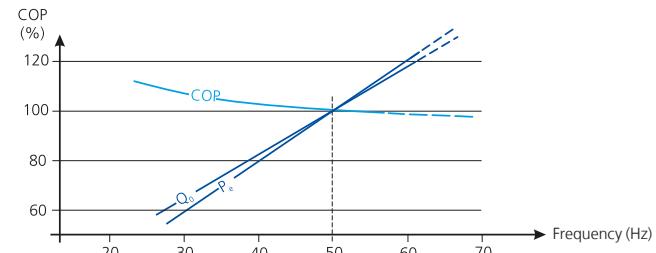

The advantages of frequency-converter operation:

- Fully variable adjustment of the refrigerating capacity on demand
- No high-energy, high-wear start/stop operation
- 25 % or more energy saving potential!
- Reduced mechanical compressor load for longer service life
- Always optimum machine pressures and operating conditions
- Lower pressure losses in the heat exchangers
- Lower cooling down and heating up losses throughout the system
- Reduced start-up current at full torque
- Part windings and star-delta circuits no longer required

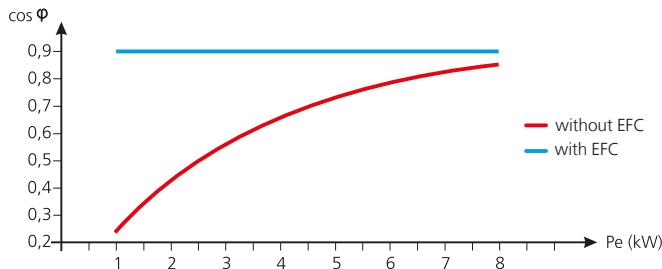

Start-up current with and without EFC

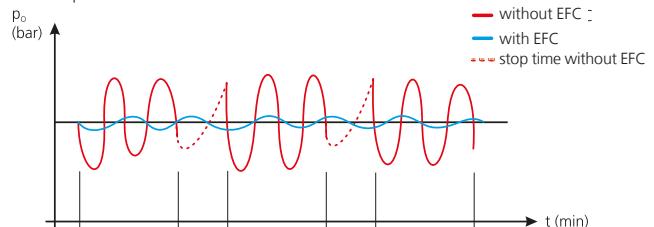

COP behaviour with EFC

Engine performance factor with and without EFC

Start/stop behaviour with and without EFC

Calculations for 4-pole compressors

Calculating the maximum possible frequency of the compressor under specific operating conditions:

The following calculation is used to obtain the maximum possible frequency at the selected operating point:

$$f_{\max} = \frac{P_{\max} \times 50 \text{ Hz}}{P_e}$$

f_{\max} = Maximum permissible frequency [Hz]

P_{\max} = Maximum power consumption [kW] (see technical data)

P_e = Power consumption at the operating point at 50 Hz [kW] (see performance data, compressors)

Calculating the corresponding refrigerating capacity:

Refrigeration capacity can be determined as a function of frequency from the following calculation:

$$\dot{Q}_{0 \text{ Betrieb}} = \frac{f_{\text{Betrieb}} \times \dot{Q}_{0 \text{ 50 Hz}}}{50 \text{ Hz}}$$

$\dot{Q}_{0 \text{ operation}}$ = Refrigerating capacity at the chosen operating point [W]

$f_{\text{operation}}$ = Frequency at the chosen operating point [Hz]

$Q_{0 \text{ 50 Hz}}$ = Refrigerating capacity at the operating point at Hz [W] (see performance data, compressors)

As a rule, the maximum permissible power consumption of the compressor P_{\max} must not be exceeded.

ESS System Electronic Soft Start

Electronic compressor starter unit

Available as option for:
HG22e, HG34e, HG34P

The start process uses an electronic soft start unit, instead of the conventional start unloader through the bypass solenoid valve, non-return valve and star-delta protector combination. This means that the compressor gets up to its nominal speed in a set time and therefore produces much lower power peaks than the classical star-delta start.

The unit is designed to fit into a switch cabinet.

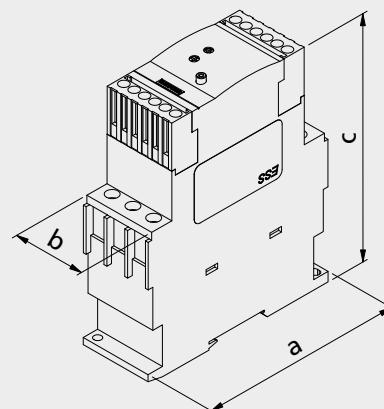

Scope of supply:

- Unit suitable for fitting into a switch cabinet
- Voltage AC 400 V - 3 - 50/60 Hz
- Control voltage AC 230V - 1 - 50/60 Hz

The advantages:

- Soft compressor start from zero to nominal speed, time controlled and monitored.
- Up to 40 % lower start-up power consumption than when using star-delta start
- No star-delta protection combination needed, no bypass between pressure and suction side needed. No solenoid valve or non-return valve needed
- No compressor damage resulting from malfunction of the start unloader.

Dimensions

e-series efficiency-optimized version

Based on our current semi-hermetic product range, with its outstanding advantages and features, GEA Bock presents you the e-series. Those compressors are efficiency optimised models for all standard refrigerants.

All compressors of the HG series will gradually be available as e-series.

Special features

With technical optimisations we improve the energy consumption of our compressors continuously. The compressors of the e-series set a new standard when it comes to motor-efficiency, gas flow and efficiency of the valve system. All this results in a higher capacity of the compressor.

Available models	Displacement 50 Hz (1.450 rpm)
HG22e/125-4 HG22e/125-4 S	11,1 m ³ /h
HG22e/160-4 HG22e/160-4 S	13,7 m ³ /h
HG22e/190-4 HG22e/190-4 S	16,5 m ³ /h
HG34e/215-4 HG34e/215-4 S	18,8 m ³ /h
HG34e/255-4 HG34e/255-4 S	22,1 m ³ /h
HG34e/315-4 HG34e/315-4 S	27,3 m ³ /h
HG34e/380-4 HG34e/380-4 S	33,1 m ³ /h

Powerful lightweights – semi-hermetic compressors for mobile applications

With the two models HG22 and HG34 in full-aluminium, light-weight construction, GEA Bock offers the perfect solution for all application areas in which the weight of the compressor is important.

Whether used in railway- or bus air-conditioning or transportation refrigeration – these compressors, which are around 40% lighter than standard compressors, offer system manufacturers new possibilities. Moreover, the compressors are available with a terminal box with reduced height, to be even more compact than the standard version.

For especially power-intensive applications, such as mobile air-conditioning, GEA Bock also offers the Pluscom model HG34P in 2-pole design.

The 2-pole drive motor generates a rotational speed of 2900 rpm (in comparison, 4-pole 1450 rpm) and so a high refrigeration capacity never before achieved in this size.

The HG34P in 2-pole design is available both in grey cast iron and in the above-mentioned aluminium lightweight design and reduced height terminal box.

Semi-hermetic compressors with 2-pole drive motor

Based on our compressors of the Pluscom series with its outstanding advantages and features, GEA Bock offers already for some time a compressor version with 2-pole drive. This compressor version now offers a mains frequency of 60 Hz and thus an increased refrigeration capacity compared to the operation with 50 Hz mains frequency.

This increase in the maximum possible compressor capacity can be realized through the use of a special valve plate system. The so-called Bock K-valve plate, which was developed by GEA Bock especially for mobile applications, is already used thousands of times in the area of bus air-conditioning and sets the international standard for quality and reliability.

Shall the compressor without a frequency converter operate at a power supply frequency of 50 Hz, the adaptation of the mains frequency is necessary.

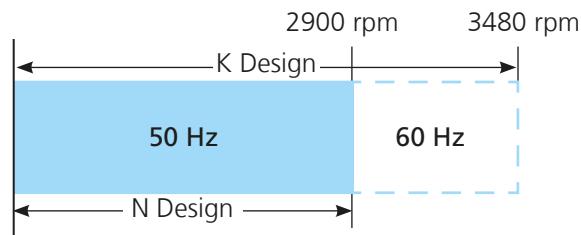

e.g. 400 V / 50 Hz

460 V / 60 Hz

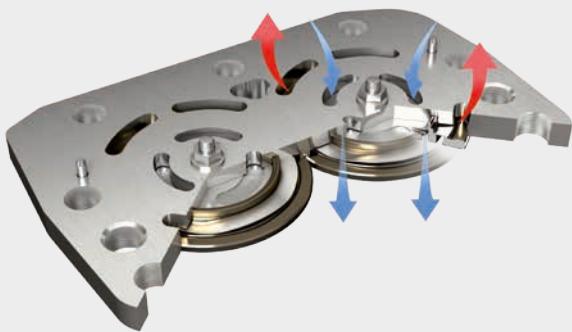

Available models	Displacement 50 Hz (2900 rpm)	Displacement 60 Hz (3480 rpm)
HGX34P/255-2 HGX34P/255-2 A	44,3 m ³ /h	-
HGX34P/315-2 HGX34P/315-2 A HGX34P/315-2 S HGX34P/315-2 S A	54,7 m ³ /h	-
HGX34P/315-2 A K HGX34P/315-2 S A K	54,7 m ³ /h	65,6 m ³ /h
HGX34P/380-2 HGX34P/380-2 A	66,1 m ³ /h	-
HGX34P/380-2 A K	66,1 m ³ /h	79,4 m ³ /h

Special features

- High performance with 2-pole drive motor (up to 3480 rpm)
- With oil pump lubrication as standard
- Bock K-valve plate
- Also available in aluminium lightweight design (option)
(ca. 40% weight savings)
- Available with terminal box with reduced height

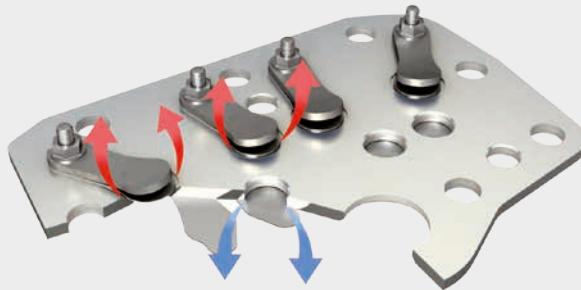

The K Design for 50 Hz and 60 Hz

- The Bock K-valve plate with ringfins
for higher loads

The N Design for 50 Hz

- Valve design, tried and trusted all over the world, with one-sided fixed finger reed valves, suction and pressure side
- Valve made out of high quality, impact resistant spring steel

Semi-hermetic 2- and 4-cylinder compressors in cast iron and full-aluminium construction

The Bock semi-hermetic compressor programme for mobile applications provides a full performance range of innovative and modern compressor designs in 2- and 4-cylinder constructions.

The ideal solution for any kind of mobile application.

Type key

1) HG = Hermetic Gas-cooled (suction gas-cooled)

2) X = Ester oil filling (HFC refrigerant e.g. R134a, R407C)

3) = Additional indication for e-series and Pluscom compressors

4) 2 = 2-poles (2.900 rpm - 50 Hz)

4 = 4-poles (1.450 rpm - 50 Hz)

5) S = More powerful motor e.g. air-conditioning systems

6) K = K valve plate

| | Motor variant -S- (more powerful motor) |
| 2-pole | Unlimited application range |

t_o Evaporating temperature (°C)

t_c Condensing temperature (°C)

Δt_{oh} Suction gas superheat (K)

t_{oh} Suction gas temperature (°C)

R134a Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

Restrictions to the operating limits may occur when using a capacity regulator.

Restrictions to the operating limits may occur when using a frequency converter. For further information see sample calculation page 52.

For operation with frequency converter:

HGX12P...-4 30-70 Hz
HGX22e...-4 30-70 Hz
HGX34e...-4 25-70 Hz
HGX34P...-2 15-50 Hz
HGX34P...-2 K 15-60 Hz

Performance data

The performance data for R134a are based on EN 12900 at 50 Hz supply frequency. This signifies 20 °C suction gas temperature without liquid subcooling.

This results in significant differences compared to specifications with liquid undercooling and/or suction gas temperatures.

4-pole compressor:

Conversion factor for 60 Hz = 1,2

Performance data for other operating points, see GEA Bock software.

ASERCOM certified performance data

For compressors with this label, the performance data are certified according to the strict requirements of ASERCOM.

ASERCOM is the Association of European Refrigeration Compressors and Controls Manufacturers.

Information about the Association and the constantly updated overview of certified Bock compressors can be found at www.asercom.org.

Relating to 20 °C suction gas temperature,
without liquid subcooling

R407C Operating limits

HGX12P / HGX22e / HGX34e / HGX34P 2-pole

¹⁾ LP = low pressure HP = high pressure

- 4-pole
 - Unlimited application range
 - Supplementary cooling or reduced suction gas temperature
 - Motor variant -S- (more powerful motor)

- 2-pole
 - Unlimited application range

① HGX34P/380-2 HGX34P/380-2 A HGX34P/380-2 A K
Please note operating limits

t_o Evaporating temperature ($^{\circ}$ C)
 t_c Condensing temperature ($^{\circ}$ C)
 Δt_{oh} Suction gas superheat (K)
 t_{oh} Suction gas temperature ($^{\circ}$ C)

R407C Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the coloured areas. Compressor application limits should not be chosen for design purposes or continuous operation.

Restrictions to the operating limits may occur when using a capacity regulator.

Restrictions to the operating limits may occur when using a frequency converter. For further information see sample calculation page 52.

For operation with frequency converter:

HGX12P...-4 30-70 Hz
 HGX22e...-4 30-70 Hz
 HGX34e...-4 25-70 Hz
 HGX34P...-2 15-50 Hz
 HGX34P...-2 K 15-60 Hz

Performance data

The performance data R407C are based on EN 12900 to 50 Hz supply frequency. This signifies 20 $^{\circ}$ C suction gas temperature without liquid subcooling.

The evaporating- and condensing temperatures are based on the dew point values (saturated vapour conditions).

This results in significant differences compared to specifications with liquid undercooling and/or suction gas temperatures.

4-pole compressor:

Conversion factor for 60 Hz = 1,2

Performance data for other operating points, see GEA Bock software.

Explanations:

① Tolerance ($\pm 10\%$) relates to the mean value of the voltage range.
Other voltages and current types on request.

② - The specifications for max. power consumption apply for 50Hz operation. For 60Hz operation, the specifications have to be multiplied by the factor 1.2. The max. working current remains unchanged.
- Take account of the max. operating current / max. power consumption when designing contactors, leads and fuses.
Switches: Service category AC3

Semi-hermetic compressors for air-conditioning applications with R407C

Based on our current semi-hermetic product range, with its outstanding advantages and features, there is now a compressor series available for the use with the refrigerant R407C with expanded fields of application.

Those compressors are especially suited for the application in mobile air-conditioning systems, such as railway air-conditioning.

Condensing pressures of up to 35 bar possible
(approx. 74 °C condensing temperature).

Available models	Displacement 50 Hz (1.450 rpm)
HGX34e/215-4 S R407C	18,8 m ³ /h
HGX34e/255-4 S R407C	22,1 m ³ /h
HGX34e/315-4 S R407C	27,3 m ³ /h
HGX34e/380-4 S R407C	33,1 m ³ /h

Special features

To ensure the reliable operation of the refrigerant R407C in countries with high ambient temperatures of up to 50°C, Bock compressors for R407C are approved for a maximum operating pressure of 35 bar.

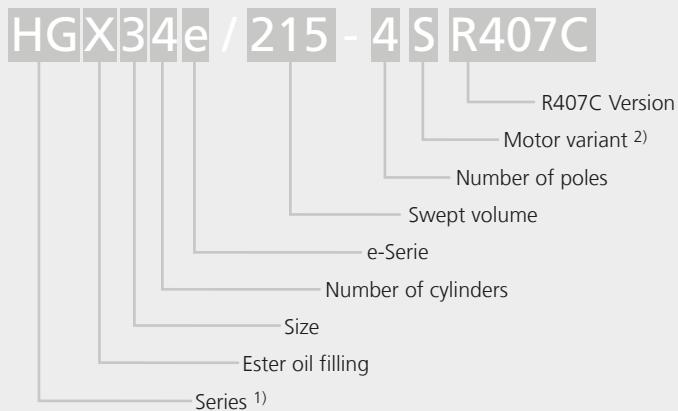

This corresponds to a condensing temperature of approx. 74 °C and opens up completely new possibilities for the use of this refrigerant.

To guarantee the highest possible operational safety, GEA Bock uses its long experience with special compressors for other high pressure refrigerants that are already used thousands of times in many mobile and stationary applications.

The refrigerant R407C

Besides R407C, R410A is also considered a long-term replacement refrigerant for R22. In addition, it is an alternative to R134a. Suitable refrigeration oils are ester oils, such as e.g. Fuchs Reniso SE55.

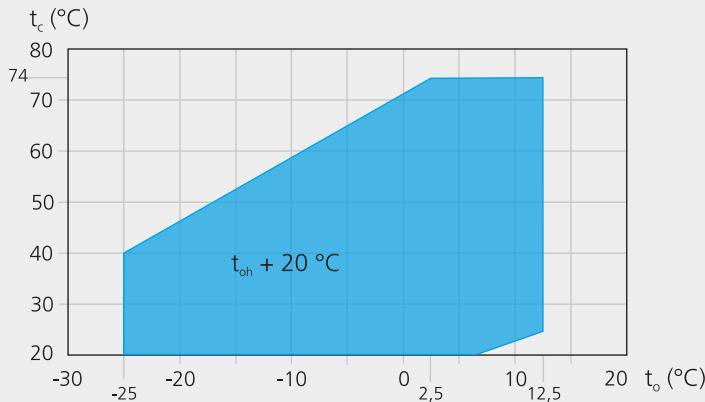

Type key

¹⁾ HG = Hermetic Gas-cooled (suction gas-cooled)

²⁾ S = More powerful motor e.g. air-conditioning systems

Unlimited application range

t_o Evaporating temperature (°C)

t_c Condensing temperature (°C)

t_{oh} Suction gas temperature (°C)

Max. permissible operating pressure (LP/HP)¹⁾: 19/35 bar

¹⁾ LP = low pressure HP = high pressure

R407C up to 35 bar Notes

Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Compressor application limits should not be chosen for design purposes or continuous operation.

Restrictions to the operating limits may occur when using a frequency converter.

Restrictions to the operating limits may occur when using a capacity regulator.

Performance data

The performance data for R407C are based on the European standard EN 12900 at 50 Hz supply frequency. This signifies 20 °C suction gas temperatures without liquid subcooling.

The evaporating- and condensing temperatures are based on the dew point values (saturated vapour conditions).

This results in significant differences compared to specifications with liquid undercooling and/or suction gas temperatures.

Conversion factor for 60 Hz = 1,2

Performance data for other operating points, see GEA Bock software.

Explanations:

- ① Tolerance ($\pm 10\%$) relates to the mean value of the voltage range.
Other voltages and current types on request.
- ③ 220-240 V Δ / 380-420 V Y - 3 - 50 Hz
265-290 V Δ / 440-480 V Y - 3 - 60 Hz
- ② - The specifications for max. power consumption apply for 50Hz operation. For 60Hz operation, the specifications have to be multiplied by the factor 1.2. The max. working current remains unchanged.
- Take account of the max. operating current / max. power consumption when designing contactors, leads and fuses.
Switches: Service category AC3
- ④ For soldering connections

Accessories

① Start unloader by means of a Bock ESS (Electronic Soft Start) IP20, (Connection clamps IP00) for installation in switch cabinet

② Capacity regulator 12 V DC, IP65

1 capacity regulator = 50 % residual capacity

Capacity regulator 24 V DC, IP65

1 capacity regulator = 50 % residual capacity

Capacity regulator 24 V - 1 - 50/60 Hz, IP65

1 capacity regulator = 50 % residual capacity

Capacity regulator 110 V - 1 - 50/60 Hz, IP65

1 capacity regulator = 50 % residual capacity

Capacity regulator 230 V - 1 - 50/60 Hz, IP65

1 capacity regulator = 50 % residual capacity

③ Oil sump heater 24 V DC, 80 W, IP66

permanently set version

Oil sump heater 110-240 V - 1 - 50/60 Hz, 50-120 W, IP66

PTC heater self-regulating

Oil sump heater 400 V - 1 - 50/60 Hz, 80 W, IP66

permanently set version

④ Thermal protection thermostat per cylinder cover ¹⁾

⑤ Terminal box with reduced height (-15 mm), (Motor protection MP10 as an extra item for installation in switch cabinet)

⑥ MP10 with 24 V DC control voltage

MP10 with 110 V - 1 - 50/60 Hz control voltage

Special voltage and/or frequency (on request)

¹⁾ Installed

Because you're never done learning - GEA Bock training and workshops on compressors

Many years ago, GEA Bock intensified its commitment in the area of customer training.

And so we offer a comprehensive array of attractive training events, from two-day practitioners' workshops in Frickenhausen to afterwork workshops throughout Germany. Regardless of the type of training you are interested in.

Three things are characteristic of all GEA Bock training:

- The captivating way that the training director carries out the events
- The strong practice orientation of the training events, and
- The fact that all training events from Bock are offered as a free service

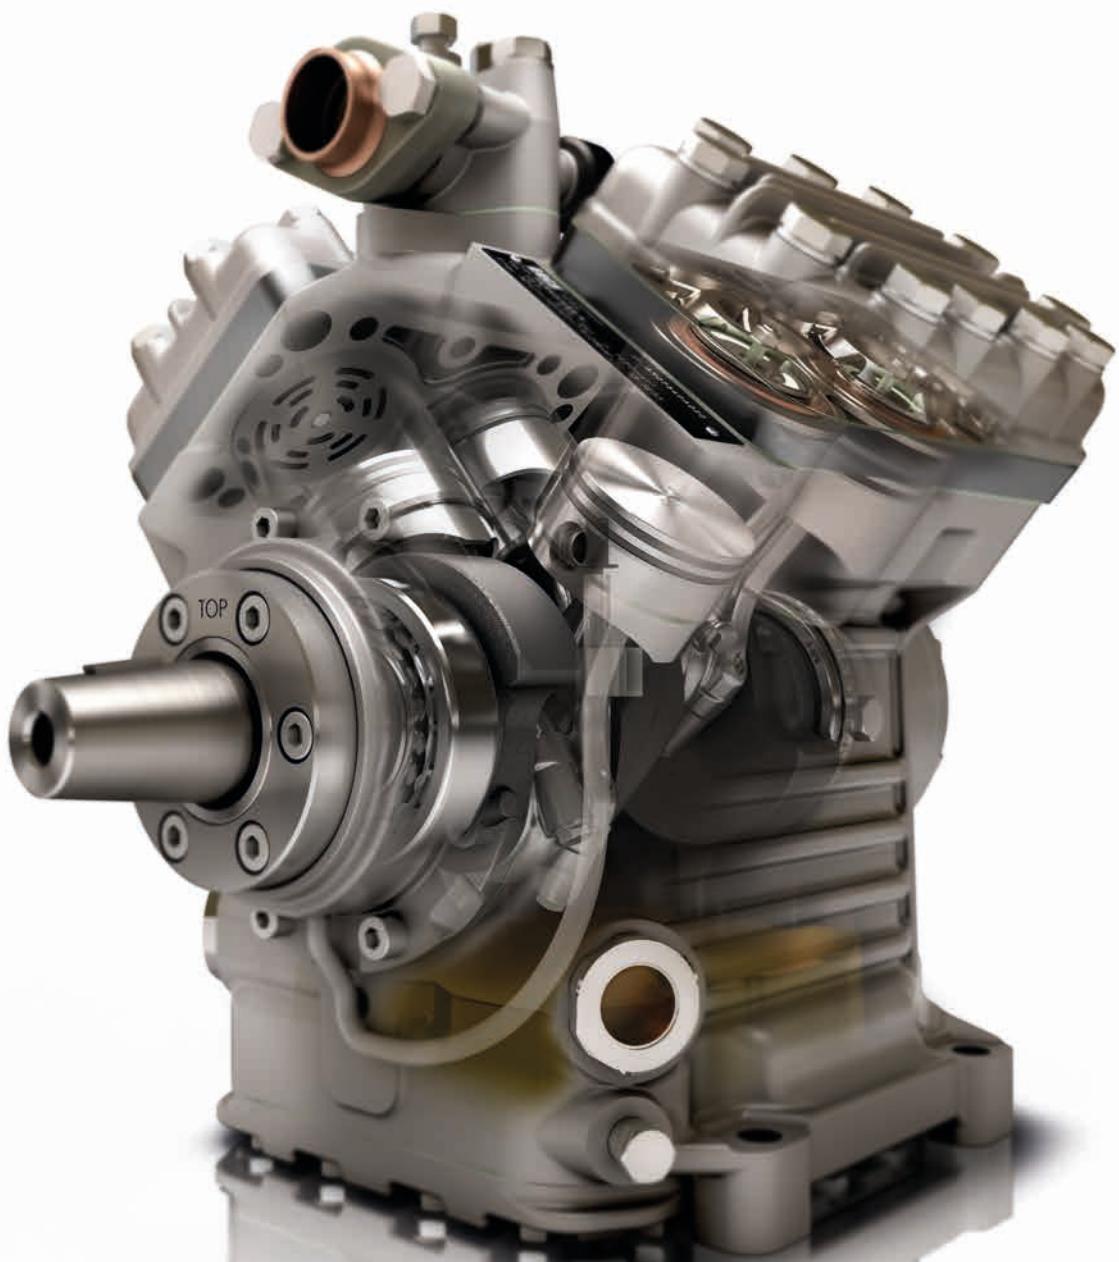

Overview of training events offered:

- GEA Bock Practitioners' Workshop
- Training tailored to your individual needs
- Training for your entire staff
- Training on your premises

For additional questions or advice, please contact our training director:

Peter Spies
